(57) Abstract :

Difficulties faced in Supply Chain for health care during COVID pandemic Abstract No one has seen anything in recent times that has turned city life upside down like Covid-19 pandemic. From the closure of city offices and the mandatory wearing of masks to restaurant restrictions, epidemic precautions have changed the way of life in cities around the world. It could be one that will continue for a long time. In fact, this epidemic, as an “urbanized” race, was the first event to affect us on a massive scale. As a result, cities need to be more vigilant in health and overall safety in order to better protect their populations. It ranks 60 cities based on 76 security indicators, including infrastructure, digital living, personal safety, environmental factors and mainly health. Epidemic readiness and Covid-19 mortality are also included this year. The conditions here well illustrate the problems faced by the people during the Corona period by calculating how the changes brought about by the epidemic have made the cities safer, more inclusive and resilient and what tourists still need to know to be safe while visiting these cities.
